QLBAR(8) QLBAR(8)

NAME

glbar-0.2.2 - Cool Toolbar for X11

SYNOPSIS

qlbar [-hHVv] [-c config file] [-m menu file] [--bar-color color] [--balloon-color color] [--font-color color] [-f name] [-s size] [-d directory] [-B true/false] [--bar-height height] [--bar-width width] [-t seconds] [--icon-width widh] [--icon-height height] [--voffset pixels] [--hoffset pixels] [-l layout] [--daemonize] [--double true/false] [--click-interval msec]

DESCRIPTION

qlbar is a Toolbar for X11. It allows quick launch applications that user specifies in menu file. QLBar (default) appears as 1 pixel height line at the top of the screen, but most appearance parameters may be configured. See OPTIONS.

OPTIONS

--balloon-color

background color of tooltip balloon

--bar-color

specifies qlbar color

--bar-height

height of a bar in pixels, default 1

--bar-width

width of a bar in pixels, default is computed as: icon width multiply icon count

-t or --bar-time

delay in seconds after that toolbar will hide

−i or --click-interval

interval (in milliseconds) between button click in double click mode

-c or --config

config file

Default \$HOME/.qlbar/config is used

--double

true or false use of double click to execute command

--font-color

tooltip balloon font color

$-\mathbf{d}$ or $--\mathbf{font}-\mathbf{dir}$

path to directory that contains TTF fonts

-f or --font-name

font used on balloon tip

-s or --font-size

tooltip balloon font size

$-\mathbf{D}$ or $--\mathbf{daemonize}$

make qlbar run in the background

-h or --help

help screen

-H or --horizontal

this option indicates that toolbar will be placed horizontaly. Same as -1 horizontal

--hoffset

horizontal offset from the corner of screen in pixels. Corner is specified by $-\mathbf{p}$ or **--position** option and is only affected when $-\mathbf{H}$ or $-\mathbf{l}$ horizontal has been choosen

QLBAR(8)

--icon-width

width of the icons in pixels

--icon-height

height of the icons in pixels

-1 or --layout

layout may be horizontal (default) or vertical

-L or --log

application will produce logs (by default to stderr)

--loglevel

this option specifies log level that will be logged. May one of: trace, debug, info, warn, error, fatal

--logfile

this option specifies the log output file

$-\mathbf{m}$ or $--\mathbf{menu}$

file containing items information: name, execute path, icon file path. Menu file format is compatible with fluxbox menu file and contains lines as follow:

[exec] (application name) {execute path} <icon path>

Default \$HOME/.qlbar/menu is used

$-\mathbf{p}$ or $--\mathbf{position}$

position of the toolbar: n, ne, e, se, s, sw, w, nw

−B or −−show−balloon

true or false show or not baloon, default balloon is shown

-V or --vertical

indicates that toolbar will be placed verticaly

$-\mathbf{v}$ or $--\mathbf{verbose}$

produces lots of output

-voffset

vertical offset from the corner of screen in pixels. Corner is specified by $-\mathbf{p}$ or **--position** option and is only affected when $-\mathbf{V}$ or $-\mathbf{l}$ vertical has been choosen

TODO

- transparent rectangle with alpha that appears when user moves mouse over toolbar item
- sliding bar instead of sudden appear, hide
- fixed qlbar icon, with clock, reminder, or other...
- right click context menu over every item with extra features (configure)
